 Process for preparing optically active 3-n-butyl phenylphthaleine
 AB - (A)
 A process for preparing optically active 3-n-butylphenylphthaleine features that under the action of optically active amine as splitting agent, the di-n-butylphenylphthaleine or mixture containing unequal (-)-(or (+))-n-butylphenylphthaleine antimer is chemically splitted to obtain high-purity (-)-or (+)-n-butylphenyl phthaleine with optical activity, which has medicinal activity in resisting thrombocyte coagulation to improve the microcirculation dystrophy of people or mammal.
